CardinalHealth
Essential to care™

Durable Medical Equipment

Moving care forward

Engineer tested, clinician approved.

Because you want to trust the products you use to help care for your patients, we built our durable medical equipment to help you offer quality care. Not only is every product 'clinician-friendly,' they have also been rigorously tested against the benchmarks that matter most, including biocompatibility, weight capacity, fully tested per ISO standards and more.*

Our products are created for clinicians who use mobility products to support their patients every day. We know because they helped us design them. We've standardized our entire DME portfolio, relying heavily on clinical input to ensure we have exactly the right product mix. So you'll spend less time searching—and more time taking care of patients.

This is Cardinal Health today.

And together with you, we're moving care forward.

Asking the experts

We began by working with nurses and physical therapists in the acute, ambulatory and home health markets. Our question was simple: What can we do to improve the products you need, particularly for bariatric patients? Their ideas were practical and powerful. You'll see the results in every product we make.

Here's just a sample:

Need bigger and better wheelchairs to accommodate your patient's needs?	Our wheelchairs offer more than 30 configuration options. No one knows your patients better than you. Configure your wheelchair to fit them best.
Need product labels that are easy to locate and read?	We've moved them where you can see them, so they're highly visible. Our wheelchair labels are clearly visible on the back, instead of hidden underneath the seat.

Saving money two ways

Not only do we offer the right products, our prices are right for the budget-conscious. We also help you control costs by minimizing labor by offering a standardized product set that is quick and easy to manage. What will you do with the time you'll save?

Other ways you'll save time

It's the simple things that really add up. Cardinal Health™ DME products have easy-to-read labels and come with complete product instructions that include tips for safety and cleaning.

All you need, all in one place

Whether you need a new wheelchair, or just spare parts, you'll find the same attention to cost savings and clinical performance.

Our products include:

- **Wheelchairs and accessories**
- **Transport chairs**
- **Walkers and rollators**
- **Crutches and replacement parts**
- **Bathroom accessories**
- **Canes, replacement parts and daily living aids**

When it's time to order, count on our distribution experts to deliver what you need, when you need it. We give you essential tools to do more of what matters most: take care of patients.

*Data on file

An assortment of products to meet patient and caregiver needs.

Wheelchairs and accessories

Take us for a test drive, and you'll never look back.
Because together, we're moving care forward.

Now you get the wheelchairs that fit your patients best. Need a wide, deep chair with a high weight capacity? Ours offer the sizes and features that are essential to most patients' needs. Want to add an anti-tip device? That's easy. Need a swing-away footrest or desk-length armrest? Just ask.

With over 30 combinations available, we have the wheelchair that's right for your patients. And every one comes standard with the features that matter to clinicians like you—because we asked. The wheelchairs have high quality craftsmanship. The products have been tested extensively. Weight capacity and material number labels are clearly visible and easy to read. All wheelchairs include a carry pocket on the back. The black vinyl upholstery is easy to wipe clean.

Wheelchairs

Cat. no.	Weight capacity	Dimensions (width x depth)	Armrest length type (all removable)	Total width (including wheels)	Packaging

Crutches and replacement parts

After a few days on crutches, you know how uncomfortable they can get. Our answer for sore armpits? Replacing the traditional foam rubber with **Thermoplastic Rubber (TPR)**—a synthetic blend that lasts long, resists peeling and most important, is soft. Your patients will feel the difference—and so will you, as you help them heal.

Crutches

Cat. no.	Weight capacity	Recommended user height	Description	Packaging
CA901AD	300 lb.	5 ft. 2 in.–5 ft. 10 in. (Adult)	Axillary, push button, adjustable, aluminum	8 pr/cs
